Quest'anno compirà 40 anni (è nata il 10 giugno del 1965), ma Liz Hurley non se ne preoccupa: la sua pelle dimostra infatti almeno dieci anni di meno.

Quando la crema non basta

Vi sembra che i trattamenti casalinghi non siano sufficienti? Allora potete ricorrere all'acido ialuronico ad azione "riempitiva". Il risultato sarà più evidente per le rughe giovani e sottili, ma è comunque consigliato per la bellezza della pelle. Come spiega il professor Antonino Di Pietro, dermatologo plastico a Milano: «Si tratta di microiniezioni superficiali che arrivano nei primi strati del derma. L'acido ialuronico, oltre a svolgere un'azione riempitiva della ruga, ha anche una

funzione stimolante sulla vita delle cellule e le aiuta a produrre una maggiore quantità di collagene ed elastina. Nel caso di epidermide molto disidratata, però, è bene preparare la pelle un paio di mesi prima con l'applicazione di maschere ricche di vitamine ed enzimi e assumere integratori a base di flavonoidi e Omega 3-6». Il risultato dura in media 3 mesi e costa circa 450 euro.

Avviata verso i 40 anni, Elizabeth Hurley possiede ancora un viso fresco e levigato, sul quale si intravedono appena lievi rughe d'espressione. La modella e attrice inglese, famosa per il lunghissimo fidanzamento con l'ex Hugh Grant, si è da poco sposata con il multimiliardario indiano Arun Nayar e secondo alcuni tabloid inglesi sarebbe in attesa del secondo figlio (il primo è

del produttore Steve Bing). «Certo, per l'età che ho, mi ritengo fortunata», dichiara Elizabeth, «ma mi prendo ugualmente cura del contorno occhi, della bocca e del collo. Per le rughe d'espressione, non ancora marcate, utilizzo prodotti riempitivi che le mimetizzano, a base di acido ialuronico e vitamina E, oltre a fare il pieno di vitamina C con agrumi e rosa canina».
